

8. The contactless communication system information carrier according to Claim 7, wherein an inner peripheral surface of the through hole has a locking rib, which cuts into an outer peripheral surface of the spacer when the spacer is forcibly
5 fitted into the through hole.

9. (Amended) A contactless communication system information carrier, comprising:

an integrated circuit chip in which an antenna coil for
10 contactless communication is formed on one surface;

a non-metal resin member which packages the integrated circuit chip; and

a weight which is made of a composition of a metal and a synthetic resin, and is placed and coupled so as to surround the
15 resin member.

10. (Cancelled)

11. The contactless communication system information
20 carrier according to Claim 9, wherein the contactless communication system information carrier is coin-shaped, and the integrated circuit chip is mounted in a central part of the contactless communication system information carrier.

25 12. A contactless communication system information
